Rocket®
Content Automation

Confidentially putting critical information into motion while achieving compliance, delivering change, and operational efficiency

Rocket® Content Automation governs information-rich systems, people, and process interactions. It uses standards-based orchestration to create and manage business processes with native support for robotic process automation (RPA), decisions, content governance and user presentation across desktop and mobile. It consolidates alternative multiple vendor tools into a unified low-code design environment, simplifying the authoring and operations of business results.

Benefits/Features

Automated quality and governance
Scale data quality and compliance efforts while reducing costs through purpose-built automations.

User approvals and content workflow
Manage content in motion workflows, customizing approval information and document interactions.

Compliance-centric digital transformation
Confidently improve sensitive business processes with compliance heavy requirements.

Bank onboarding and monitoring
Deliver next generation onboarding experiences and account monitoring that scales your growth.

What our customers have to say

> Without the help of Rocket's Professional Services team to get us started in the right direction, we would have been lost."

JOHN WALDRON
Head of Operations,
Hastings Mutual

With Rocket® Content Automation you can:

Achieve faster time-to-value
Tailor user experiences, automation with various systems, and information management through a single and agile solution studio.

Gain business, IT, and compliance insights
Built-in auditing and KPI support that puts your team in control of business, IT, and compliance insights, ensuring operational performance.

Increase productivity and efficiency
Remove or amplify human efforts throughout your organization by removing manual work and providing timely secured information and experiences.

Mitigate compliance risks and costs
A closed loop system manages security, data redaction, and other information governance services to modernize compliance while lowering costs.

Modernize without data and process gaps
Integrate diverse systems (databases, web services, and even legacy systems with RPA) to ensure existing apps and data are available as you modernize.

Align with agile business goals
Through a cloud native architecture, achieve modern delivery (to AWS, Azure, or on-premises) with a rapid delivery low code toolchain.

Data/Proof Points/Insights

250+ Global Content Services Customers.	~85% of Automation use-cases across industries supported.	100% Accuracy and Compliance.	24 x 7 x 365 Automation.

Gain new levels of agility and efficiencies
