

Rocket® DevOps

Secure, end-to-end CI/CD for IBM® i

Rocket® DevOps is a modernization platform specifically designed to enable end-to-end Continuous Integration and Continuous Delivery (CI/CD) practices for your multi-code environments that include IBM® i. Build the structure and flexibility you need to extend holistic DevSecOps best practices to the IBM i, pursue innovative experimentation, leverage Kubernetes and other cloud native technology, respond easily to compliance audits, and adapt to ever-changing expectations be it via process, technology, or experience.

Benefits/Features

Purpose-Built solution

Offers end-to-end DevSecOps for IBM i powered businesses.

Continuous and automated testing

Taps into DevOps test workflows and environments to shift testing left and automate processes.

Automation and authentication

Ensures developers can focus on rapid iteration and testing, which frees them from time-consuming, repetitive, manual tasks.

Holistic and simplified reporting

Generates holistic reports across both RPG and non-RPG development and deployment workflows with the click of a button.

Customizable interface

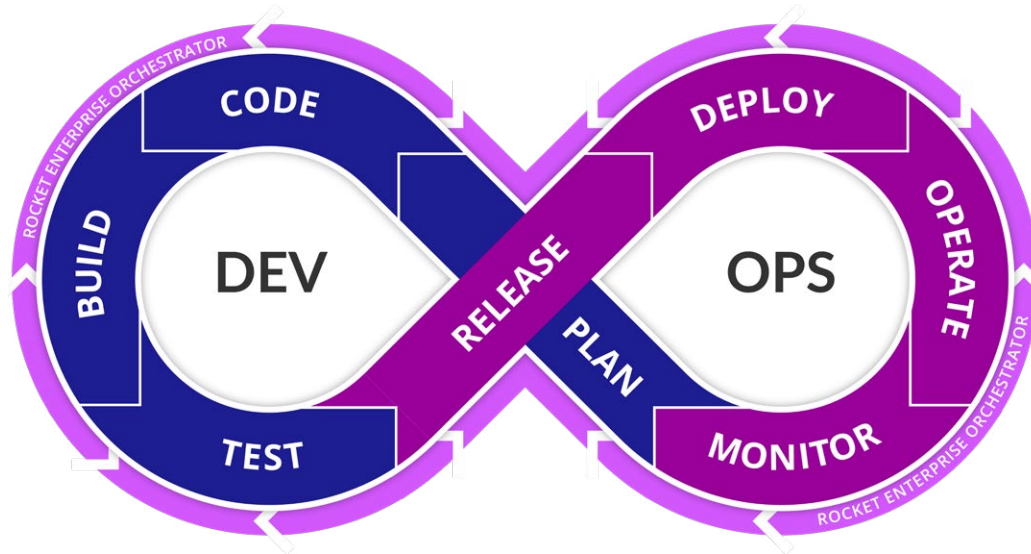

Provides visibility into the central secure repository, which allows users to browse through any application and view all its contents and clearly shows each component that is resident in each of the software life-cycle environments, and who is working on it.

Built-in compliance

Automating as much of the DevSecOps process as possible in one multi-code environment ensures compliance with regulatory and internal process mandate.

Rocket DevOps third-party and open-source tool integrations

With Rocket DevOps you can:

-  **Make flexible CI/CD processes a reality**
Establish agile DevSecOps methodologies and processes across your entire multi-code environment.
-  **Gain speed to market**
Continuous testing unlocks greater speed to market, reduces risks of bugs or issues entering production, and minimizes future needs and costs of fixing bugs.
-  **Build structure to ensure compliance**
Rather than audits triggering a stressful and sometimes costly exercise, automating workflows in one multi-code environment offers compliance built right into your platform.
-  **Deliver holistic and simplified reporting**
With Rocket DevOps Community Manager, you can build personalized home pages with their own dashboards, views, filters, and reports.
-  **Standardize DevSecOps best practices across your organization**
Rocket DevOps supports Windows, Linux, UNIX, and modern languages and frameworks such as Angular and HTML5, which makes it the best choice for organizations seeking to standardize software development and delivery processes across diverse systems.
-  **Eliminate project bottlenecks**
Get code out the door quickly by enabling non-RPG talent to engage and support the IBM i DevOps process.

The future won't wait—modernize today.
