

Rocket® Zebb™

Automated Process Rerun Management

Rocket® Zebb™ is a comprehensive automated process rerun management system that improves productivity in data centers by reducing manual tasks that are required to restart or rerun jobs. Zebb handles reruns automatically with precision and accuracy, all without changes or modifications to Job Control Language (JCL). It provides the user with precise information and efficiently determines the most logical restart point—usually at the point of failure.

Benefits/Features

Restart capabilities

Features industry-exclusive generational restart capabilities that allow automatic reruns of previous jobs.

Seamless integration

Submits and restarts jobs through seamless integration with Rocket® Zeke™ to provide extended control of processing.

Avoids redundancy

Records condition codes to avoid redundancy (re-execution of previous steps is not required).

User control

Provides a full-screen online system with complete user control over restart definitions and operations.

Restart recovery

Collects all restart and recovery information at the beginning of each step to avoid complete restarts.

Restarts

Recognizes automatically that abended jobs are being rerun, provides users with precise information, and then restarts at the most logical and efficient point.

Vaulting services

Maintains a duplicate (vault) database and uses its local electronic vaulting services to perform quick restarts, avoiding the need to perform database recoveries or backup routines if DASD or CPU failure occurs.

Rocket® Software's suite of workload automation solutions simplifies and optimizes your end-to-end value streams. **Learn more about our solutions:**

In addition to complete restart capabilities, Rocket® Zebb™ includes:

-  Absolute CPU-outage recovery facilities
-  A reporting facility
-  A recovery simulation facility
-  Historical reporting
-  Electronic vaulting and disaster recovery support
-  Automatic scheduler interfaces
-  Step-level condition-code checking
-  Automatic problem-tracking interfaces

Rocket® Zebb™ optimizes the mainframe by automating restart and freeing your operations teams to focus on other value-added activities.
