

# Rocket® Enterprise Orchestrator

## End-to-end DevOps value stream orchestration solution

### Harmonize DevOps value streams

Now more than ever, IT leaders must deliver value to customers with high quality, velocity, and efficiency. This requires aligning business strategy with software development and delivery—and optimizing the DevOps value streams that span the entire hybrid IT infrastructure. Rocket Enterprise Orchestrator enables IT teams to visualize, automate, and coordinate end-to-end development and operations tasks needed to deliver solutions across operating systems, platforms, and business applications. It unifies an organization's DevOps strategy with the tools and applications already in place to maximize existing investments.

### Benefits/Features

Establish design-time configuration of DevOps value streams, meeting the needs of development and delivery teams.

Define and use variables across the system to make reusable, highly customized, and complex workflows.

Manage and monitor run-time execution of value streams, equipping administrators with dashboard, logs, notifications, and high availability.

Specify critical branching for tasks with an infinite number of conditions to ensure automation flows meet business requirements.

Span mainframe to cloud with the capability to distribute work across the entire IT ecosystem, including hybrid cloud environments and sysplex awareness on mainframes.

## With Rocket® Enterprise Orchestrator you can

**Optimize Software Development and Delivery**  
Increase quality, velocity, and efficiency in DevOps value streams.

**Increase Enterprise Agility**  
Easily shift workloads between technology stacks.

**Extend DevOps Collaboration**  
Align IT and the business across teams and technologies.

**Increase Workload Throughput**  
Visualize and manage the execution of thousands of workloads from a customizable dashboard.

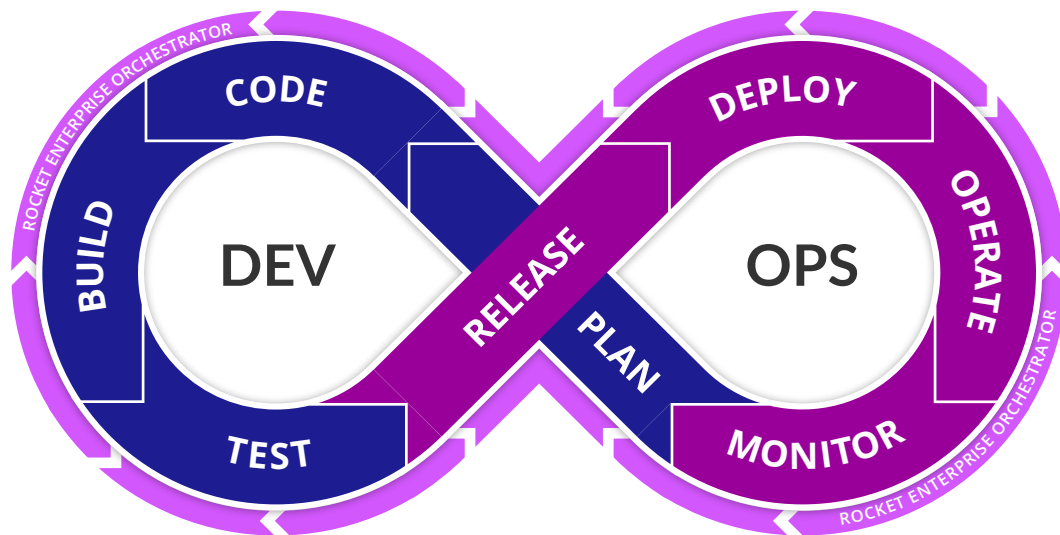

**Elevate DevSecOps**  
Build security into every step of your DevOps value streams.

**Improve Productivity**  
Replace manual scripting and data collection with intuitive capabilities.

## Rocket Enterprise Orchestrator

Rocket Enterprise Orchestrator advances traditional workload automation by including DevOps pipelines that automate value streams across complex IT ecosystems.

The future won't wait—modernize today.
