Colorado Adoptions POWERS ELECTRONIC RECORDS MANAGEMENT with 1mage and UniVerse Database Technology

1mage Software Inc., (pronounced “One Image”), has been in the document imaging / document management industry for nearly 20 years. The company, which writes virtually all of its own document management software, has used Rocket Software’s UniVerse database technology since inception to help it deliver innovative solutions at an attractive price.

The Colorado state government mandated that its adoption agencies go to an electronic records management system by 2010 so that all adoption records, past and future, could be managed effectively. The goal was to improve the availability of current and future records while reducing the costs inherent in a paper-based system, increasing efficiencies, reducing errors, and improving response times.

Several of Colorado’s leading adoption agencies responded to the state’s mandate with an extensive search for document imaging / document management solutions. Each concluded that 1mage’s imaging system for use on Microsoft Windows servers delivered what they needed at a cost they could afford.

Implementing a Single Solution to Manage Multiple Media Files

These agencies worked with 1mage Software professionals and personnel from the State of Colorado Department of Human Services to create a common meta-tag structure for these very important electronic records and files. The end result – all records, files, video and audio records now can be included in the archived image management system.

Today, existing adoption records are being scanned indexed and archived using 1MAGE DMS (Document Management Software) supplied by 1mage. The Agencies’ installations have been set up to efficiently manage all electronic records according to the guidelines established by the governing state agency and to provide a coordinated records management plan. Colorado adoption agencies using the 1mage solution include Hopes Promise, Adoption Options, Colorado Christian Services and Adoption Alliance.

Going Beyond Saving Time and Money

1mage and its professional staff delivered a robust, cost-effective solution well within the State of Colorado’s deadline. Agencies running the solution have reduced document management time and cost, improved efficiencies, reduced likelihood of errors, and improved their response time to the state and to their clients.

1mage Software Inc. Englewood, Colorado

1mage benefits through its quick speed of development to cost-effectively meet the State of Colorado’s deadline and its ability to store and retrieve multiple media types in one flexible, responsive database. 1mage has also experienced increasing productivity per employee, with fewer mistakes, through streamlined document processing and delivery, and has reduced handling costs per transaction, resulting in reduced IT maintenance, overhead, and document warehousing costs.

What Benefits One, Could Provide Value to Many

Adoption agencies in other parts of the country may benefit as well. Based on its experience with the State of Colorado and its agencies, 1mage has developed what it believes to be an exceptional package for this very special need and has expanded its offering to all 50 states. The package is available for Microsoft Windows, RedHat Linux and several flavors of UNIX including IBM AIX, HP-UX and Sun Solaris.

The company shares the credit for its success with the UniVerse database technology underlying the 1mage solution.

"We've built our solutions on UniVerse from the very beginning, and we're never regretted that early decision. Rocket's powerful database delivers the speed, flexibility, and range of capabilities we needed to deliver a solution that handles documents, files, and video and audio records in one efficient, cost-effective package. A traditional relational database could never have handled these diverse types of media as quickly as inexpensively as UniVerse can."
