

Rocket® Aldon

Report Manager - View. Analyze. Comply.

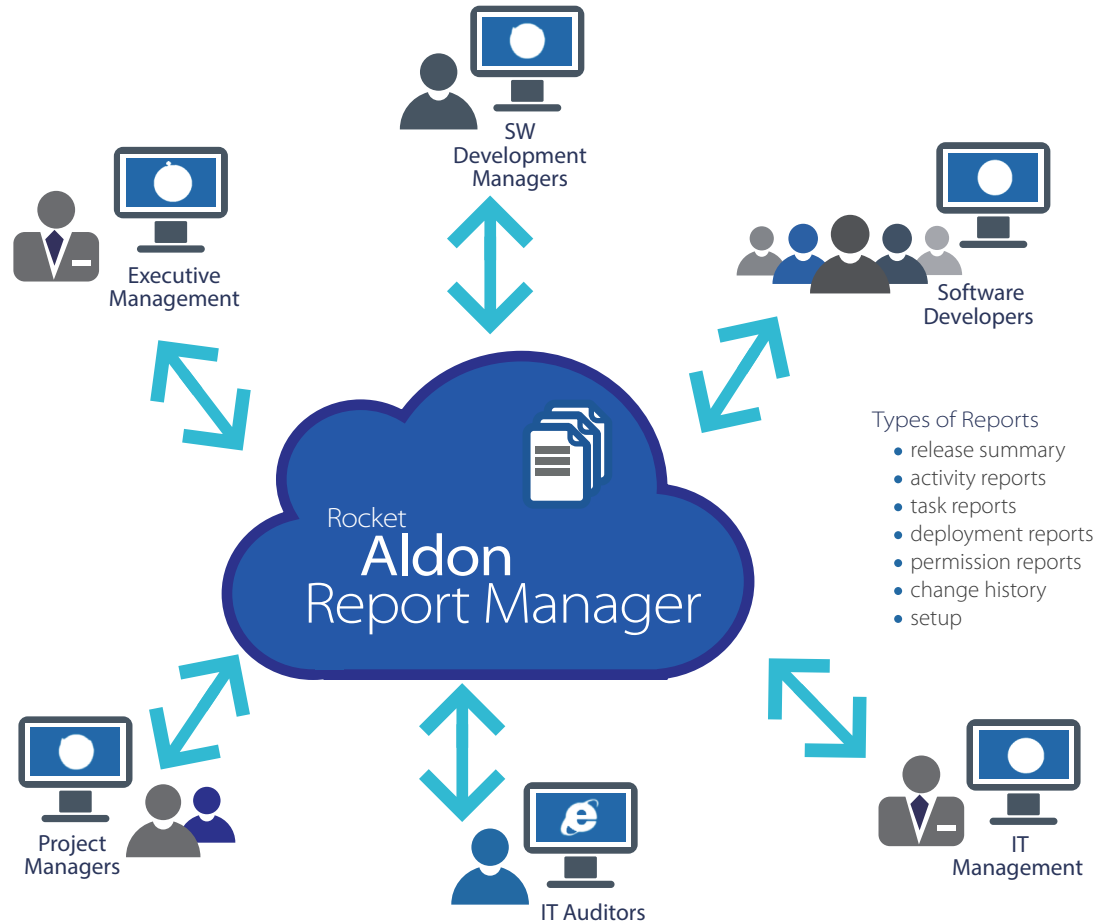

Get complete visibility into the software development process and easily view management information at-a-glance

Align business goals with IT initiatives through business intelligence reporting

Increase productivity through real-time views of projects

Simplify regulatory compliance and take the pain out of audits

Work with data from Rocket Aldon Lifecycle Manager (Enterprise Edition) and Rocket Aldon Lifecycle Manager (IBM i Edition)

Web-based Reporting for IT Compliance

Rocket® Aldon Report Manager (RM) is a web-based report management solution built on a widely-used and actively-supported open source reporting technology. It allows you to view, track, understand, and manage all software development data and generate the reports necessary for simplified audit compliance while successfully managing timely software delivery. Through our centralized home screen, you can easily select and run reports from one of our pre-packaged templates or create customized reports to meet your needs. You can rapidly generate reports regarding task status, activity history, rerelease setup, change request backlog items, permissions by release or by user and lifecycle progress using selection criteria so you can focus on the most pertinent information.

Aldon RM allows you to run IT like a business, giving you access to comprehensive management information for insight into all application development and maintenance activities. You can rapidly generate reports regarding task status, activity history, release setup, change request backlog items, permissions by release or by user, and lifecycle progress using selection criteria so you can focus on the most pertinent information.

Get Complete Visibility into the Software Development Process and Easily View Management Information At-a-Glance

Whether you are a CIO, a project manager, or a member of the development team, Aldon RM gives you the ability to see into the total software development process by tasks, activities, and application releases. Through Firefox or Internet Explorer, you can view summary information at-a-glance and then drill down to the detail that you need from our nested reports. You gain complete insight and control by automatically viewing and tracking application development's progress. Our reports help organizations easily achieve regulatory compliance by capturing and monitoring all IT engineering functions in an automated fashion. Say goodbye to manually tracking activities through spreadsheets and emails. Additionally, our pre-packaged report templates provide you with immediate access and analysis of your development process and change activity. You will always have business-critical information you need at your fingertips.

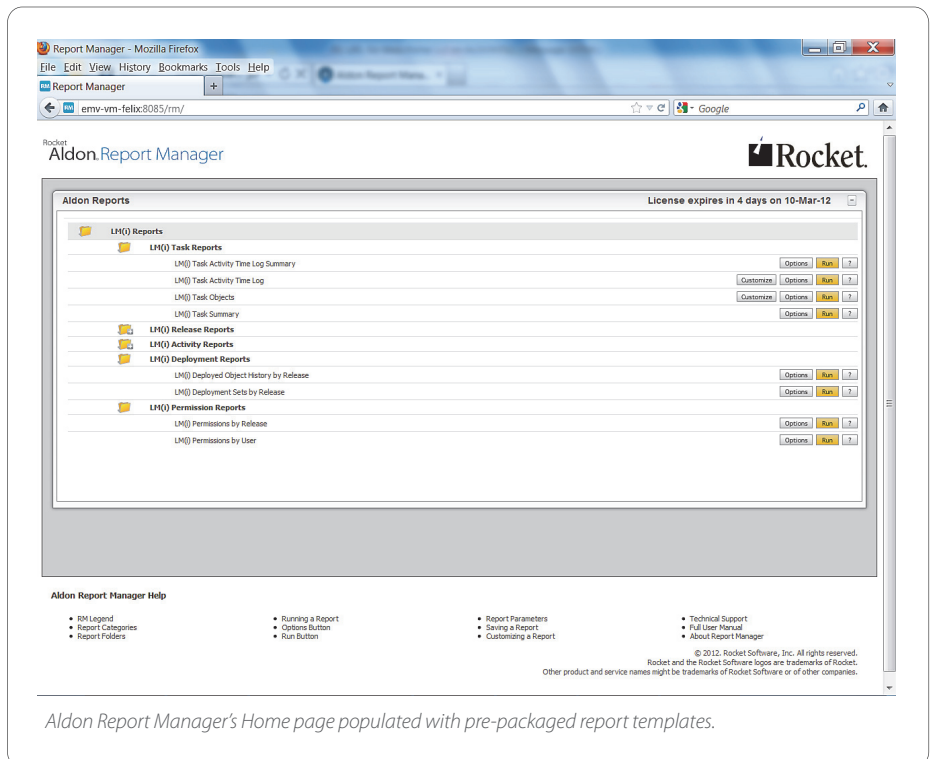

Align Business Goals with IT Initiatives through Business Intelligence Reporting

Aldon RM gives business executives and development managers the ability to work together in tracking, analyzing, and managing the backlog of change requirements and work-in-progress, ensuring that IT continues to deliver according to business priorities. You get the power you need to understand your software development information and business requirements from a single reporting engine. Through our real-time queries, you can discover trends, measure performance, identify issues and exceptions, and respond accordingly. Drill down for more specific information to review and analyze detailed activities in order to help you with IT to

business alignment. Our software provides a single point of control and the visibility needed for effective management of the process while generating on-the-fly audit reports from a web-based interface, anywhere, anytime.

Improve Productivity with Real-time Views of all Application Development Projects

As a project manager or software development manager, you know that meeting your deadlines is critical to the success of your project. Our software gives you real-time views of your entire application development process through on-the-fly reporting, so you can track and monitor your teams' progress and make any necessary adjustments to meet your release date. You can see which projects are on time and on budget and which ones are running over; or, see which staff members are busy and who has available time. By automating the reporting process, you not only eliminate inefficient manual reporting, but also significantly improve your overall productivity by having timely information you need to perform your job.

Aldon Report Manager's Home page populated with pre-packaged report templates.

How

How Rocket Aldon RM Works

Select. Click. Run. From your browser window, you access Aldon Report Manager's home screen and choose which type of report you wish to run. From the options button, you then select the different criteria for your particular report, along with the output format in which you wish to view your report and simply click "Run." Aldon RM takes it from there by querying the database based on your selection criteria and producing a report which shows you real-time information and status.

Simplify Regulatory Compliance and Take the Pain Out of Audits

With Aldon RM, you can capture and monitor all IT engineering functions in an automated fashion from a central location while reducing the stress of preparing for an IT audit. Our software provides auditors with detailed documentation of the software lifecycle process setup and all day-to-day activities. They can easily see verification information proving the integrity of your production environment. The Aldon RM permission reports provide everything your auditors need; the authorized actions for users, role assignments, and role changes. Our software's browser-based interface is simple to learn and understand so auditors can rapidly begin to generate their own reports when appropriate.

The screenshot displays two browser windows from the Aldon Report Manager application. The top window shows a report titled "Aldon LM(e) Activities by Part" with a table of activity logs. The bottom window shows a report titled "Aldon LM(e) Activity Summary by Release" with a summary table of activities.

Technical Specifications

Client Requirements

- ❖ Mozilla Firefox 11.0 or higher
- ❖ Microsoft Internet Explorer 8 or 9 (in compatibility mode)
- ❖ Adobe Acrobat Reader 7.0 or later for PDF output

Server Requirements

- ❖ 2 GB RAM
- ❖ 300 MB free disk space
- ❖ Microsoft Windows Server 2008 (64 bit)
- ❖ BIRT 2.5.2 (installed with the package)
- ❖ Apache Software Foundation Jakarta Tomcat Version 6 (installed with the package)
- ❖ Java Runtime Environment 1.6.0.31 (installed with the package)

LM Editions Supported

- ❖ Aldon LM(e) 6.1A IBM or later on an IBM i running V6R1 or higher
- ❖ Aldon LM(i) 7.5G or later on an IBM i running V5R4 or higher
- ❖ Aldon LM(e) 6.2C running Linux

The screenshot displays the Report Manager application interface, showing several reports and task summaries. The main report is 'Aldon LM(e) Activities by Type', which lists activities with columns for Timestamp, Activity Status, Part Name, Release, From, To, and By User. Below this, there are two smaller reports: 'Aldon LM(i) Task Summary' and 'Aldon LM(i) Active Tasks Associated with Release'. The 'Aldon LM(i) Task Summary' report shows task details such as Task ID (TK001003), Task Description, and Properties. The 'Aldon LM(i) Active Tasks Associated with Release' report shows a table of tasks with columns for Task ID, Type, Status, Priority, CM, DVP, ITG, QUA, PDN, Rel, Other Releases Count, Objects, Created, Age, Due Date, Till Due, and Estimated % Comp.
