Rocket® LegaSuite

Unlimited Access to Enterprise Applications

Gain more value from existing applications without replacing them

Extend the Value of Any Enterprise Application.

Migrating away from business-critical systems is fraught with risk and cost. That's why so many organizations realize that reusing their proven enterprise applications with new web and mobile technology is the fastest, most affordable, and safest way to enable new business capabilities.

Rocket® LegaSuite is a suite of application tools that lets you create modern user interfaces and web APIs to leverage your mission-critical mainframe, IBM i, UNIX, and Windows applications. With LegaSuite, you can improve business processes, decrease training time, and gain more ROI from the applications that support your business today.

Access Enterprise Assets from Popular Mobile Devices.

LegaSuite Mobile lets you create new mobile apps for iOS, Android, and Windows Phone and quickly integrate them with your back-end applications —without having to learn a new set of mobile skills.

You can connect mobile apps to your enterprise assets easier than ever with our web API gateway, and deliver mobile apps to your enterprise users in less time, with less risk, and without the need for mobile-specific development teams.

Modern Web Access to Enterprise Applications.

LegaSuite Web lets you quickly repurpose your host applications as modern applications delivered on web and mobile browsers. You can build rich web applications that work on any platform and extend them with new technologies like HTML5, AJAX, JavaScript, and REST/JSON.

Your browser-based applications can reuse existing host screen applications, and combine them with web services and database connections to leverage any enterprise data source. With the latest web functionality and easy browser access, users will never realize the enterprise application being accessed behind the scenes.

Turn Back-End Applications into Web APIs.

Enterprise information today needs to be accessed and shared with employees and other applications. LegaSuite Integration is a web API gateway that makes it quick and easy to connect to back-end applications by turning your enterprise applications into standards-based web APIs.

LegaSuite Integration unlocks business-critical information and allows it to be accessed by any web, mobile, and middleware application that your business needs. This lets enterprise applications become completely abstracted to front-end applications and everyday users.

Offer fast and easy access to any enterprise application from web and mobile devices

Integrate and streamline existing applications to improve efficiency and reduce costs

Adapt existing applications to new technologies in a non-invasive and rapid way

Build cross-platform mobile applications that easily tie into your back-end applications

Integrate back-end legacy applications with mobile and web applications

Build HTML5 versions of enterprise applications

Translate enterprise applications into foreign languages

ROCKET

Localize Enterprise Applications.

LegaSuite Text Translation Tool (TTT) translates your application texts, labels, and messages into Unicode-compliant, localized texts in any language. Applications can be translated into multiple languages when TTT is used with LegaSuite Web. TTT can also translate IBM i application types at the application source code level.

Real-World Expertise.

Offering rapid access and connections to enterprise applications takes more than just tools—it takes expertise. Rocket has experience with hundreds of customer projects and has developed a practice that addresses every aspect of application modernization, enterprise access, and integration. From enterprise mobility to web self-service projects, you can get to market with solutions that reuse the applications which run your business today.

Access and Connect to Any Enterprise Application

LegaSuite provides development and modernization capabilities for a wide variety of business computing platforms. Both legacy and new mission-critical applications become accessible to users with the devices and software they like to use—browsers, mobile devices, and tablets.

Reusing applications reuse is faster, safer, and more cost-effective than replacing applications. With LegaSuite, you can deliver new business capabilities in rapid, well-defined increments at very reasonable costs.

Source Apps	Server OS		Target	Supported
IBM System z	z/OS		Browsers	IE
	z/Linux			Firefox
	z/VM			Chrome
IBM i	iOS			Safari
UNIX	HP-UX		Tablets & Smartphones	iPad/iPhone
	Solaris			Android
	AIX			Windows
	OpenVMS			
Linux	Red Hat		Desktops	Windows
	SUSE			Mac
Windows	Server 2003			Linux
	Server 2008/R2
