- 4 of the top 5 healthcare services

And Thousands More

Markets Served

Personalized Support

Solutions

According to Gartner Research, organizations worldwide have invested \$3-4 trillion in mainframes and other complex back-end systems that make it possible to optimize key business processes. But as those organizations seek to capitalize on new advances such as self-service BI, cloud, mobile, and other emerging technologies, it's essential that those in-place systems evolve to meet changing needs.

Organizations running the world's most critical applications and data trust Rocket to take care of the infrastructure they have today, while helping them extend the value of those investments for tomorrow. Rocket helps IT leaders solve their toughest software problems, optimizing the performance of existing infrastructure while simultaneously building "integration highways" that pave the way to new and improved customer experiences.
