

Rocket® ChangeMan® ZMF InfoMan Interface Option

Synchronizing change management

Rocket® ChangeMan® ZMF and the InfoMan (INFO) option for ChangeMan ZMF play complementary roles in automating, controlling, and reporting throughout the Change Implementation lifecycle. Both focus on managing change through releases or packages, rather than individual elements. InfoMan excels at organizing information, while ChangeMan focuses on controlling application libraries and related activities. Together, InfoMan and ChangeMan create a strong, adaptable system for managing the Change Implementation lifecycle.

Benefits and Features

Information Sharing

Approvals gathered through InfoMan are automatically recognized by ChangeMan, streamlining processes, and InfoMan users have accurate, up-to-date information without manual input.

Approvals

ChangeMan ZMF integrates with InfoMan to streamline application approvals, and end-users continue working in their TSO/ISPF address spaces under ChangeMan or InfoMan as usual.

Additional Benefits

Supports package approvals directly within InfoMan and streamlines the management of ChangeMan packages through the InfoMan platform.

Improve information management
with synchronized change management.
