Cost-Effective Growth Solutions

Streamlining a major airline's systems
with Rocket® Enterprise Suite

CHALLENGE

Modernizing Mission-Critical Apps

Facing rising expenses from outdated IT, an Asian airline replatformed 11 key applications, including maintenance tracking and staff travel. This avoided costly rewrites but came with tight deadlines and technical challenges.

- **Cost of rewriting**
  Rewriting legacy apps was too costly and slow.

- **Operational risk**
  Mission-critical apps were essential for continuity.

- **Technical challenges**
  Transitioning from mainframes created database issues.

SOLUTION

Modernize Airlines with Rocket® Enterprise Suite

01 Legacy system support
Rocket's expertise in mainframe and Unisys® ensured a smooth transition.

02 Assessment tools
Rocket® Enterprise Analyzer prepared apps for efficient modernization.

03 Replatforming with ease
Rocket® Enterprise Server simplified migration and reduced mainframe reliance.

04 Quick execution
Swift implementation avoided disruptions and met tight timelines.

RESULTS

Rocket Software Drives Airline Modernization

Smooth Production Migration
Migration completed in nine months with a seamless transition to production.

Mainframe Cost Savings
The mainframe was decommissioned in six months, saving costs and resources.

Improved Performance Systems
Modern systems improved performance and unlocked new growth opportunities.

Rocket software

Modernization. Without Disruption.™
