

# Rocket® Enterprise Data Migration Service

Data is the lifeblood of your applications. As you replatform them to [Rocket® Enterprise Suite](#) (formerly a Micro Focus® product) moving that data with integrity and on schedule is non-negotiable. Rocket Enterprise Data Migration Service securely replicates and synchronizes IBM® Db2® for Z/OS® production data to distributed and cloud targets, ensuring accuracy and currency for testing and cutover while preserving the ability to back out if needed.

## With Enterprise Data Migration Service, you can:

- Continuously sync Db2 on z/OS sources with distributed relational database targets with low-latency, bidirectional change data capture (CDC) to de-risk cutover.
- Validate on copies of production data with parallel runs to prove function and performance before go-live.
- Execute controlled cutovers with a clean rollback path and extended backout window via bidirectional sync.
- Preserve data integrity under change with ordered replay, schema evolution, and checkpoint/restart prevent drift and reduce break/fix.

## Why Enterprise Data Migration Service?

- Purpose-built to support Enterprise Server replatforming projects: Short-term subscription aligned to finite timelines — no long-term lock-in or shelfware.
- Single accountability: One partner for Enterprise Suite replatforming and data migration for streamlined contracting, services, and support.
- Lower data migration cost and complexity: Consolidated tooling plus bundled implementation and enablement; reuse a single CDC stream across environments.
- Sub-second, at-scale replication: 116M records per second with under 0.5 seconds of latency keeps source and target in lockstep — enabling true parallel testing and safer cutovers.

Rocket Enterprise Data Migration Service with bundled implementation and enablement is a complete, time-bound data migration solution for your Enterprise Suite replatforming project — technology, expertise, and execution in one package.
