Rocket software

Rocket® Enterprise Output Management

As you replatform mainframe workloads to cloud or distributed platforms, managing enterprise content, application print output, and reports become complex. You need a way to migrate this data quickly and securely without inheriting a fragmented, costly, and complex set of tools. Much of this historic mainframe data is also ready for additional automation, including the safe use of AI, to support long-term competitiveness.

Rocket® Enterprise Output Management, part of Rocket® Enterprise Suite (formerly a Micro Focus® product), meets these needs by consolidating output, report, and content management into a single, modern solution. It is designed to simplify your modernization journey, centralizing content management while providing advanced capabilities such as safety-first GenAI-powered insights, data retention policies, and robust access controls. With unified support from one vendor, Enterprise Output Management reduces integration risks and lowers total cost of ownership, so your mainframe content and output replatforming project succeeds.

With Enterprise Output Management, you can:

- Consolidate vendors and reduce costs by moving from multiple legacy packages to a single, proven solution.

- Leverage predictable pricing to help you scale with confidence.

- Centralize and modernize content management to support your mainframe re-platforming and ongoing hybrid cloud operations.

- Streamline your project with a single vendor for simpler contracting, unified support, and a consistent services approach.

- Ensure security and compliance for sensitive enterprise content with advanced redaction, data retention, and access control policies.

Why Enterprise Output Management?

- Fully compatible with Rocket® Enterprise Server for seamless integration.

- Proven services approach to re-platforming output, report, and content.

- Proven track record helping enterprise clients migrate decades of content to the cloud.

- Modernization-ready with support for cloud deployment and GenAI capabilities.

- Flexible deployment options for cloud or on-premises environments.

- Future-proof AI features with a safety-first approach to support current or future needs.
