

Rocket® ETX

The fastest, easiest, most secure remote access for graphically intense applications.

Modern teams working with graphically intense applications demand uncompromised performance, seamless global collaboration, and fortress-grade IP security. Rocket® ETX is engineering for high-compute workloads, making it the premium VDI choice for graphically intense applications. With Rocket® ETX, organizations can achieve up to a 30% improvement in worker productivity, enabling teams to collaborate effectively, protect critical data, and accelerate cycles - anywhere, on any device.

When every pixel, second, and idea counts, trust Rocket® ETX.

Benefits/features

01 Accelerate your design cycles

With frictionless, real-time collaboration across time zones and endpoints — without risking your sensitive data.

02 Slash your admin workload and costs

With instant deployment and scaling across any OS, any cloud, anywhere.

03 Deliver a truly local-like experience

For even the most graphics-intensive software, with proven 4K and vGPU support.

04 Guard your most valuable data

With encrypted, always-on, never-on-endpoint VDI.

With Rocket ETX you can:

01

Drive operational excellence

- Access EDA, chip design, simulation tools, and other graphically demanding apps instantly from anywhere using ultra-optimized ThinX and WDP graphics protocols.
- Share multi-user sessions and pass control globally to review designs and images in real time.
- Maintain uninterrupted productivity with always-on session resilience and automatic failover.

02

Propel market leadership

- Accelerate tape-outs and speed products to market with frictionless, collaborative design cycles.
- Securely collaborate with external partners and third-party vendors without risking intellectual property loss.
- Enforce IT compliance and governance easily through policy-based controls.

03

Optimize resources and reduce risk

- Optimize costly EDA and compute licenses through centralized virtual desktop infrastructure (VDI) usage and right-sizing.
- Prevent costly IP and other data leaks by keeping all files on a secure backend, never on the endpoint device.
- Reduce IT total cost of ownership by eliminating redundant high-end workstations and minimizing helpdesk support.

04

Leverage functionality built for graphically intense applications

- Deploy a premium VDI platform built to enable graphically intense use cases.
- Slash admin workloads using a single centralized dashboard to manage automated deployments across Windows, Linux, and Unix environments.
- Deliver a true local-like experience for the most demanding software with proven 4K and NVIDIA vGPU support.

Modernization. **Without Disruption.**™
