Rocket CorVu Training Course
CorBusiness Applications Administration

The CorBusiness Application Administration course is designed for individuals responsible for the installation, implementation, and administration of Rocket CorVu. It focuses on Knowledge Library development, which is the metadata layer between the CorVu software and the database being accessed. Additionally, security set-up and operation of the CorVu Scheduler is covered in this class.

Topics Covered

- Rocket CorVu architecture
- Connecting to an Access database
- Building the Knowledge Library
    - Creating virtual databases, tables and fields
    - Creating table joins
    - Generating Entity Relationship Diagrams
- Overriding the data type
- Creating and using pick lists

- Implementing data server manager security
- Implementing DynaMart security
- User name security
- Miscellaneous Knowledge Library topics
- Using the Scheduler
- Application portability
- Using the CorVu menu designer

Duration

- Two days

Prerequisites

- Completion of the two-day CorBusiness Applications I course, or equivalent experience with Rocket CorVu.
- Understanding of Windows functionality, relational database concepts, and client/server functionality.
