

# Rocket® INFO/X Enterprise

## Capture and report IBM Z® production environment data

In today's evolving IT world, data centers require powerful yet easy-to-use automation tools to manage their complex environments. In addition to the job validation that ensures syntactic correctness, there is also a need to maintain asset management for these jobs.

Rocket® INFO/X Enterprise is designed to automatically capture, cross-reference, and provide current information about production environments. IT personnel can better analyze the impact of changes to production components and avoid mistakes that cause costly production outages with INFO/X Enterprise.

### Benefits/Features

#### Makes current information available

Manages assets across multiple LPARs and uses Db2® for efficient updating of new information

#### Automates tasks

Eliminates the manual work involved in documenting jobs

#### Increases production efficiency

Enables efficient production, JCL analysis, and operations documentation

#### Accelerates turnaround time

Returns jobs to production faster due to reduced research and analysis time

#### Creates comprehensive documentation

Generates complete, reliable, and accurate job documentation

#### Interfaces with data center solutions

Interfaces with library management, tape management, change control, schedulers, security, and other data center software products

During the analysis process, INFO/X resolves all overrides, refer-backs, and symbolics and stores this data in a repository. Since this information is stored in a central repository, all users can access the same current information.

Did you know [Rocket® PRO/JCL](#) is a natural pairing with INFO/X? It brings JCL Management tooling for your developers to complement the documentation and cross-referencing provided by INFO/X.

## INFO/X can help any IT operation:

### Document data center batch environments

A sophisticated documentation system that maintains current and accurate information in these complex environments.

### Cross-reference applications across the enterprise

INFO/X produces an enterprise-wide cross-reference that parses the JCL, extracts key elements, and organizes them in a repository.

### Modifications and management

Automatic Incremental Update provides efficient updating of the repository.

**A powerful JCL asset management tool that manages your complex mainframe environments.**
