

## MOBIUS CONTENT SERVICES

Accelerating the Digitization of Business and Processes

### DELIVER THE VALUE OF INFORMATION

Mobius Content Services provides an open, flexible, and scalable architecture to manage large volumes of information. It captures, governs and delivers digital content and assets generated by people, applications and machines at web-scale volumes and high-performance levels on-demand. Content is managed through its lifecycle and is made available to people and processes wherever and however it is needed.

Mobius Content Services is architected to support open standards, leverage cloud capabilities, and deploy on cloud, on-premises and in hybrid-cloud configurations -allowing cloud adoption at the pace of your business. Its capabilities make it easy to federate content, integrate applications, and automate business workflows to deliver content in any required business context.

### CONNECT WORKFLOWS TO THE BUSINESS USER

Mobius Content Services provides a visual workflow designer. With its drag and drop interface and visuals that match the business flow, users can quickly assemble embedded workflows to match their business processes. Once deployed, Mobius workflow delivers content captured from business applications and systems in context with the user's work. Workflows can be monitored and rapidly modified to provide the agility users need to meet today's dynamic workplace.

### POLICY-DRIVEN GOVERNANCE AND COMPLIANCE

Mobius Content Services provides policy-driven governance services to precisely and securely manage and automate the lifecycle of enterprise content. Role-based policies govern who can access, view and modify content. Content-based policies set rules to capture, classify, encrypt, redact, retain, and dispose of records, giving users the ability to comply with corporate governance and government regulations such as the General Data Protection Regulation (GDPR) and the California Consumer Privacy Act (CCPA).

### FEDERATE ACCESS FOR SINGLE VIEW OF CONTENT

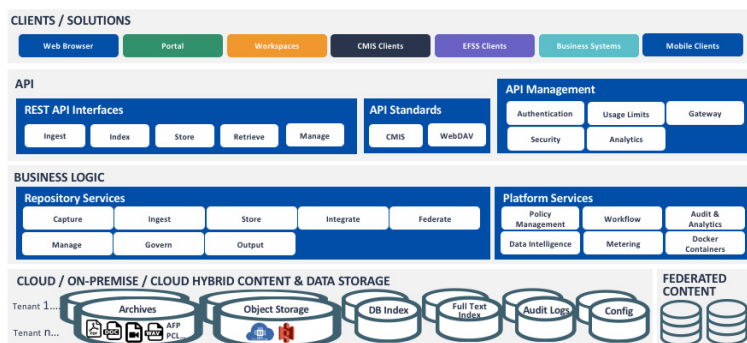

Mobius Content Services supports federation and migration of content from content repositories and business applications regardless of size, format, volume, or platform. You can rationalize enterprise content, reduce content sprawl, and retire costly and outdated enterprise content management systems, without interrupting lines-of-business. Moving enterprise content between platforms does not require reprocessing of data and managed archives.

### BENEFITS

- **Increase Productivity:**  
Information accessed anytime, anyplace, anywhere - securely
- **Improve Operational Performance:**  
Information managed by centralized policies in a consistent & automated manner
- **Less Compliance Risk:**  
Information is governed to be secure and compliant with regulations
- **Optimize Deployment:**  
Systems can be consolidated and deployed in the cloud or hybrid content environment
- **Lower Cost:**  
Total cost of ownership reduced with less maintenance

### USE CASES

- **Digital Transformation:**  
Unify sprawling content into single view with Federation Services
- **Cloud-First and Hybrid-Cloud Adoption:**  
Embrace the cost savings, versatility and elasticity of true cloud deployments
- **Compliance Programs:**  
Manage information in compliance with information privacy laws  
  
Secure information by encrypting at rest  
  
Create and retain records of all types of content

### Federation provides a single view of content in repositories across the organization:

- Purpose-built connectors exist for many widely-adopted applications, including SAP®, IBM CMOD, IBM FileNet, OpenText Content Suite, OpenText Documentum, Microsoft Office®, Microsoft SharePoint®, Salesforce and more. These specific integrations seamlessly feed information and documents between Mobius Content Services and other applications.
- Screen-level integrations empower users to access documents, create forms and begin workflow processes directly from the interface of business applications such as Microsoft SharePoint and SAP.

## DEPLOY ANYWHERE

Mobius is containerized for fast and simple deployments. This deployment model gives you the flexibility to deploy on-premises, private cloud, public cloud, and hybrid-cloud environments at the pace of your business. Standards-based REST APIs are used to connect and interact with Cloud Services, allowing you to leverage cloud capabilities for elasticity and scale.

## THE FOUNDATION FOR DIGITAL TRANSFORMATION

### Storage Services

Stores content with multi-tier policies that automate the placement, movement and management of content across on-premises, cloud, and hybrid environments including to Amazon Web Services and Microsoft Azure.

### Integration and Federation Services

Provides REST APIs and content management interoperability (CMIS) to integrate business applications, distributed content sources and mainframe systems.

### Workflow Services

Next-generation workflow automation with low-code/ no-code workflow design tools, and rapid deployment technology to quickly improve and adjust automation of tasks and business decisions.

### User Interface Services

Gives organizations the ability to create their own user interfaces for applications, portals and touch-screen mobile devices, utilizing a complete library of UI components; all UI functions are accessible through REST API.

### Governance and Compliance Services

Define content policies to comply with rules and regulations. Mobius Content Services protects content by encrypting content at rest, redacts personally identifiable data, and provides event-based records management.

### Capture Services

Captures electronic information from best-in-class scan/capture tools that extract and classify data from paper documents. Mobius Content Services then indexes metadata, applies governance policies and archives information with associated business transactions for access and collaboration.

### Ingestion Services

Provides the ability to ingest, parse and archive petabytes of data at web-scale loads, index information for full-text search and deliver faster throughput for high-volume processing.

### Output Management Services

Used to centrally control the output, distribution and guaranteed delivery of electronic documents regardless of document type, distribution method and output. It controls the delivery, including pull printing and delivers documents to multiple endpoints (fax, email, print, Web, etc.) simultaneously without requiring multiple copies and predefined format conversions.
