

# Rocket® Life Cycle Manager™ Total Solution

For accurate change control in multiple software or document configurations

Companies today use a wide range of solutions to manage their code and their application life cycles. The Rocket Life Cycle Manager (Rocket LCM) Total Solution provides a solid singular replacement that is efficient and effective in performing the same tasks, and more.

The Rocket LCM Total Solution provides an easy-to-use, menu-driven environment for controlling changes to multiple configurations of software or documents, and it ensures that only authorized changes are incorporated into sanctioned baselines, releases, or production environments. An orderly development process is assured by using Rocket LCM to control the migration of changes throughout the software lifecycle.

## Benefits/Features

### Simply Install and Go

All definitions, structures and processes are already declared.

### Versioning

Versioning of all managed components including executables.

### Production Backout

Reverts production to its previous state.

### Update Production Libraries

Secure production source and executable code.

### Packaging

Packaging to manage related changes as a processing unit.

### Analysis

Analysis of impact of change.

## With Rocket LCM Total Solution you can:

### Drive the Development Process

As a developer, you now have the power to export items from production, make changes, create the package, and act as controller of the package.

### Application Management

Information is stored in a hierarchical manner. The independent applications are stored as systems, and within each system the z/OS library structure can be mirrored.

### Dependency Management

Rocket LCM includes Dependency and Build facilities that detect, track and report dependencies between the components.

### Manage Change

Rocket LCM can store any machine-readable information and track all changes made to that information.

### Package Management

Rocket LCM streamlines the definition of change packages and allows the user to manipulate each as a single unit.

## TECHNICAL SPECIFICATIONS

- Multi-LPAR support
- Automation for Db2® Binds, CICS Newcopy, IMS ACBGEN, etc.
- Access to all facilities managed by external security (RACF/ACF2/Top Secret)
- Allows independent applications to be stored as systems, hierarchically
- Stores any machine-readable information and tracks all changes made to that information
- Allows access through TSO/ISPF panels

The future won't wait—modernize today.
