

Rocket® Process Integration (IBM® i)

Integrate your IBM i with the rest of IT to increase productivity and drive innovation

Rocket® Process Integration enables businesses running IBM® i applications to build workflows and innovative experiences that align with how customers and employees engage with your company and not with how IT is built. Unlock valuable data and logic within your IBM i core systems and create APIs to connect them to the rest of the business without the need to touch underlying legacy code or business logic within your core systems. This allows you to modernize your hosted applications for mobile access, self-service workflows, or cloud-based services.

Benefits/Features

Connect your IBM i applications to the rest of the business

Rocket Process Integration provides intuitive tools that enable you to unlock and leverage valuable data and business logic from host applications in a more connected and holistic way. Improve customer experiences, streamline workflows, and deliver more value to the business from your IBM i applications.

Create APIs without in-house development expertise

Enable development teams to build frontend solutions with modern languages, then connect those solutions to your IBM i applications and data via APIs without needing to touch legacy code. Attract new talents required to create digital-centric experiences while retaining the stability provided by your core IBM i applications.

Deploy and manage your APIs securely

Rocket Process Integration simplifies deployment while retaining clear oversight of modernization development. It includes Rocket® Modern Experience (MX) and Automation Hub that provide a central location with tools to help deploy and manage your APIs correctly, secure them with role-based access and separation of duties, optimize performance and monetization, and ensure that high-priority users always have access.

Improve customer experience

Converting repetitive, time-consuming tasks like data entry, tracking, and escalation into automated workflows allows customer service representatives to focus on higher-value customer interactions. Leverage automation to provide customer support and services with self-service tools that meet the expectations of today's modern consumers.

With Rocket Process Integration, you can:

Extract discrete functionality and data from your host systems and make those capabilities available to virtually any application.

Provide transactional data that runs your business, from one or multiple sources to those who need it.

Improve customer experiences, streamline workflows, and deliver more value to the business from your IBM i applications.

Experience Rocket® Intelligent Legacy Automation

Rocket® Intelligent Legacy Automation (Rocket® ILA) and its family of products, Rocket® Process Insights, Rocket® Process Automation, and Rocket® Process Integration, bring intuitive, low-code automation to thousands of IBM i workflows, applications, and sessions. Rocket® ILA provides the clarity and tools needed to overcome ambiguity and build traction towards full IBM i modernization and optimization.

The future won't wait—modernize today.
