

Rocket® iCluster®

Cost-effective high availability and disaster recovery for IBM® i

IBM® i systems host some of the world's most business-critical applications – where no downtime is acceptable. Rocket® iCluster® is an easy-to-use high availability and disaster recovery (HA/DR) solution for IBM i. iCluster minimizes downtime and data loss, with recovery times measured in minutes for reduced operating risk. Flexible licensing that's priced on a per-server (rather than the more costly per-processor basis) simplifies deployments while significantly reducing costs. And, best of all, you'll never be hit with unexpected transfer costs with no additional functionality.

Benefits/Features

High availability and disaster recovery

iCluster minimizes downtime and data loss, with recovery times measured in minutes for reduced operating risk.

Increased efficiency

Business applications have concurrent access to both master and replicated data, enabling teams to perform planned maintenance tasks without affecting primary system performance.

Risk mitigation

Proactive issue notifications and self-correction for replication problems help teams identify and address potential issues before they affect system performance.

Simple user interface

Intuitive user interface simplifies monitoring and troubleshooting and doesn't require dedicated administrators with extensive IBM i experience.

Anytime, anywhere access

iCluster's single-point, multiple-node administration console monitors events in real time, and runs in any web browser—even on your mobile device—for anytime, anywhere access.

What our customers have to say

“Even though iCluster is in the background, it is critical to our enterprise—and the support team at Rocket has been invaluable to our learning how to use the product.”

CHERYL GEESEY
IT Director,
Wolverine Packing Company

With Rocket iCluster you can:

Maximize availability of your IBM i applications and data

Reduce downtime related to unexpected IBM i system interruptions, with real-time, fault-tolerant, object-level replication.

Recover from outages in minutes

Continuously replicate a recovery point to a warm standby server and deploy within minutes should the need arise.

Reduce TCO of your IBM i and HA/DR systems

Protect your IBM i investment and preserve your IT budget with per-server licensing that is 5x less expensive than traditional per-processor licensing.

Reduce monitoring and reporting time

IBM i journal data and displays replication status in terms that are clear and easy to understand—your team can say goodbye to tedious manual reporting and monitoring processes.

Increase your team's efficiency

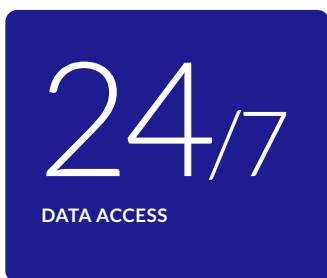

Rocket iCluster is easy to buy, easy to configure, and easy to use. It has everything you need for your IBM i environment, with a single installer and no modules or add-ons.

Minimize risk and damage

Save your business from the cost and brand impact related to outages and downtime.
