Rocket® TMON® PA for z/OS®

Improve performance and capacity for IBM z/OS

Rocket® TMON® PA for z/OS® allows organizations to understand the mainframe from the inside out. Organizations can discover LPARS, Service Classes, Report Classes, I/O Subsystems, and more; view graphical representations of all discovered metrics; perform simulation modeling of the LPAR environment to determine optimal LPAR configuration; and look back upon historical trend analysis of resource usage over all key resources, including MSU 4 hour rolling average, Goal Mode workloads, and DASD I/O controllers and devices.

Benefits/Features

Make better decisions
Utilize in-depth trending and forecasting for Db2®, CICS® TS, z/OS Modeling, and Business Unit Analysis to eliminate risk and plan for future utilization needs.

Automate analysis and reporting
Utilize fully automated analysis, reporting, and integrated web publishing for total control and visibility.

Monitor and measure capacity
Quickly measure and assess the impact of capacity-on-demand and its resulting effect on workloads.

Store the data you need
Store short- and long-term performance data online, collected and summarized to your needs.

Manage cross-enterprise performance
Perform enterprise-wide management regardless of platform or geographic location and manage multiple systems, comprising thousands of servers and workstations for a single point of control.

Modernize with visualization
Use TMON PA Scope to visualize performance value streams and reduce mean time to repair based on KPIs and alerts.

With TMON for z/OS, you can:

Increase enterprise visibility

Gain insight into the entire infrastructure via the web-based dashboard.

View clear, concise performance information

Pre-defined or customized reports cover real-time and historical data.

Make better system management decisions

Access hundreds of metrics to understand true system behavior and verify that z/OS systems are meeting your business requirements.

Improve staff effectiveness

A set of easy-to-use, integrated tools allows your staff to spend more time tracking performance and less time training on multiple products.

Simplify your systems environment

Integrate easily with other TMON PA products to deliver a complete, easy-to-use performance management solution onto a single desktop.

Extend your performance capabilities

Integrate products and data from Rocket Software and third-party products for the ultimate performance management solution.

The future won't wait—modernize today.
