Rocket software

Rocket® Zena™

Optimize operational business flows across platforms

As IT operations environments become increasingly complex across their hybrid IT infrastructure, operations teams must manage thousands of workloads and execute hundreds of business processes on time, with accuracy, and in compliance across technology stacks. Rocket Zena™ is a modern, multi-platform workload automation solution easily deployed through Docker containers that enables operations teams to design, visualize and automate IT processes from a single console to optimize operational business flows, from mainframe to cloud. With Rocket Zena™, operations teams can lower costs for multi-platform workload automation, optimize business process flows by integrating with critical applications, and ensure critical cross-platform automation.

Benefits/Features

Manage Production Statistics and Reports
Intuitive views of production statistics and reports ease monitoring and intervention when necessary. The production statistics provide drill-down support that navigates you to specific details.

Maximize Workload Automation Flexibility
Rocket Zena™ features a graphical process whiteboard for task definition. This component-based architecture minimizes redundant definitions and maximizes flexibility.

Integrate with Ease and at Scale
Rocket Zena™ enables workload management on multiple platforms. It seamlessly integrates application development and server environments, which eliminates manual scripting of existing applications with newer technologies–greatly reducing overall costs.

Centralize Scheduling Management
Rocket Zena™ enables you to manage distributed scheduling through a centralized console with dashboard capabilities, including predefined as well as user-customizable views and reports to meet individual user needs.

What our customers have to say

With Rocket Zena you can:

Improve Operational Excellence
Optimize business process flows with advanced workload automation.

Increase Productivity, Scalability
Define processes and tasks once, execute infinitely, and free up staff to focus on value-added work.

Reduce Operational Complexity
Simplify the management of complex cross-platform processes and hybrid IT environments.

Ensure High Process Completion
Automate complex processes for predictable operations to beand reliable, repeatable, and error-free.

Rocket® Zena connects your application to your workflows

Microsoft SQL Server	Docker	Amazon Web Services	Servicenow
Oracle	Micro Focus	SAP	PeopleSoft
OneDrive	Hadoop	Ellucian	Informatica
Google Drive	CyberArk	HashiCorp Vault	Thycotic
Arcon	AWS Secrets Manager		

The future won't wait—modernize today.
