Rocket software

Rocket® ChangeMan® ZMF IMS

Improve productivity and increase quality for both IMS™ and non-IMS applications

Rocket® ChangeMan® ZMF provides effective change management for both IMS and non-IMS applications under one software configuration management system. With the IMS Interface Option, ChangeMan ZMF encompasses the full IMS application development cycle, including the appropriate migration and generation of DBDs, PSBs, ACBs, MFSs and all of their related components at each phase of the software life cycle.

Benefits/Features

01 Managing IMS Environments with ChangeMan ZMF

ChangeMan ZMF streamlines installations for production and test IMS regions, easily integrating processed components into the IMS execution environment, with IMS-specific options appearing only when needed.

02 Improve Reliability

Improves the reliability of IMS application generation procedures by automating key processes. Automatically parses source and generates all related objects.

03 Reduce Time Requirement

Participates in the backout of changes from IMS production libraries, reducing time requirements when installing changes to IMS application.

04 Managing IMS Components With ChangeMan ZMF

The IMS Option integrates seamlessly with ChangeMan ZMF, requiring minimal extra work for the administrator.

05 Increase Productivity

Provides productivity gains to database administrators by relieving them of their generations procedure responsibilities.
