

Rocket® EDX

A reliable, cost-effective EDI cloud-managed service

Rocket® EDX, an EDI cloud managed service, lets you outsource all of your global EDI requirements. Your business will benefit from the speed and accuracy of processing orders, order acknowledgements, ship notices, invoices and more, making it simple to collaborate with your trading partners located around the world. Anywhere, anytime. Whether you're in retail, wholesale trade, manufacturing, warehousing/ logistics/3PL, or another high-growth, high-volume industry, Rocket EDX gives you reliable EDI that stays ahead of your business. We deliver end-to-end management of EDI B2B supply chain integration as a service, ensuring document flow with both EDI and non-EDI enabled trading partners anywhere, anytime. The service routes and monitors all EDI communications, and acknowledges and reconciles all EDI transactions. A web-based dashboard lets you track, trace, and report daily on all transactions, speeding issue resolution, and business optimization.

Benefits/Features

EDI as a managed service

Outsource all of your global EDI requirements, day-to-day tasks, and change management needs to the proven EDI experts at Rocket Software.

No need to be an EDI expert

We handle any-to-any format translation, data mapping, integration, enrichment, and validation across tens of thousands of transactions a minute.

Your data is secure

Rocket EDX is deployed in the Amazon Cloud. We treat your data like it's our own and we are constantly monitoring for security updates.

Reliable EDI that stays ahead of your business

Ensures document flow with EDI and non-EDI trading partners. Routes, monitors, acknowledges and reconciles all EDI communications and transactions.

Benefit from a cloud solution

No need to purchase servers or translation, mapping and communications software. EDX includes daily monitoring, updates and changes, support, and backups.

The Rocket Software EDX web portal provides a comprehensive set of features for managing Electronic Data Interchange (EDI) and business integration workflows. Key functionalities include:

Dashboard: Users can access a customizable dashboard that displays widgets with various metrics such as top trading partners, document flow (inbound and outbound), and document status. Users can create their own dashboards and share them with others based on permission settings.

Transactions Visibility: The platform allows users to view document life cycles and track business transactions, including purchase orders, invoices, and shipping notices.

Reprocessing & Resend: Users can easily reprocess and resend documents if necessary, aiding in error recovery.

Alerts & Notifications: Customizable notifications alert users about errors in document processing or integrations, such as issues with Shopify or other ecommerce platforms.

User & Role Management: Administrators can create and manage user accounts, assign roles, and control access to documents and data.

Audit Logs: The system maintains comprehensive audit logs for document actions, providing transparency and security for data management.

User Preferences: Each user can set preferences for notifications, view options, and default dashboard settings.

With Rocket EDX you can:

Retain complete visibility

Use the web-based dashboard to track, trace, and report on all transactions, speeding issue resolution.

Use your EDI formats

Rocket EDX supports all EDI standards and communication protocols including custom formats.

Reduce TCO with fast ROI

Our SaaS model provides a low entry cost, with scalable capacity and service that you can link to results.

Integrate with ERP and other systems

Our system-agnostic, single-platform EDI management approach helps you achieve a successful implementation.

Rely on our EDI experts

Our managed services team lets you focus on what you do best: running your business.

Integrate with your ERP, and supports all EDI standards and communication protocols

Rocket EDX integrates with many different ERP and other business systems, from well-known vendors, to niche and specialist vendors. Whatever business system you're using, our system-agnostic, single-platform EDI management approach will help you achieve a successful implementation.

Rocket EDX supports the key EDI message standards as well as the ability to deal with custom formats of almost any type, including in-house formats, and many more standardized CSV and XML formats. The most commonly supported EDI message standards include:

- ANSI X12 - EDIFACT - VDA - ODETTE - openTRANS - Idoc - cXML - xCBL - TRADACOMS

Rocket EDX supports all the frequently used communication protocols including:

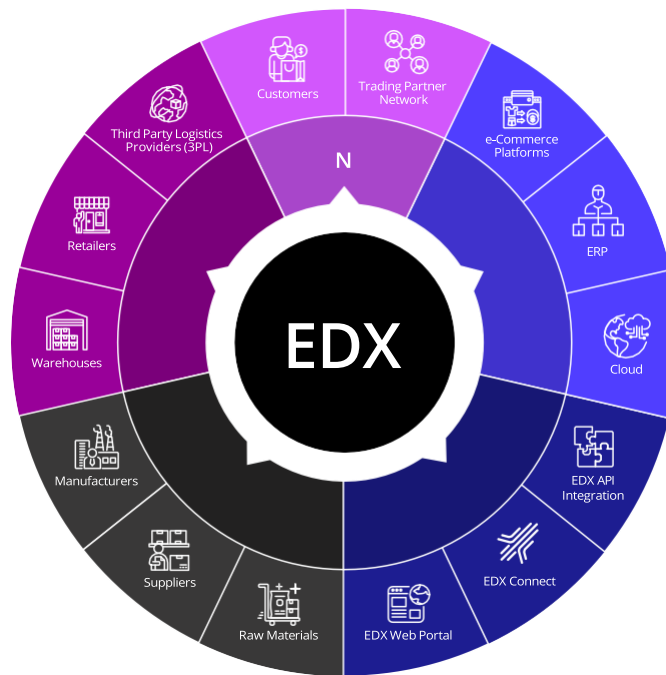

- AS2 (Applicability Statement 2) • OFTP2 (ODETTE File Transfer Protocol 2) • HTTPS (HyperText Transfer Protocol Secure) • HTTP (HyperText Transfer Protocol) • FTPS (File Transfer Protocol Secure) • SFTP • API integration • X.400

Rocket EDX works alongside business systems from vendors including:

- Infor • Microsoft • Oracle • QAD • SAP • abas • Asseco • ORGA-SOFT • ProALPHA

Rocket EDX Supports e-commerce Integration:

- Shopify
