Rocket® software

Rocket® Mobius® Distribution Services

Rocket® Mobius® Distribution Services is a key component of Mobius' enterprise content services platform, designed to manage and distribute your business content across various mission critical channels.

Distribution Services enables users to create and modify deliveries and templates, manage recipients, and address various distribution aspects: content types, distribution groups, email templates, recipients, recipient groups, and more. It also facilitates the distribution of resources from Mobius Server. This enables the creation of new deliveries using content types, the management of distribution groups as deferred deliveries, and the establishment of users and user groups as recipients and recipient groups within its system. It supports recurring, deferred, and one-time or ad-hoc deliveries, and integrates with email, print, and Rocket® Cypress channels for distributing content.

Solution Overview

Mobius uses Distribution Services to administer its content to recipients through Email and Print output channels. With Distribution Services, users create pre-defined packets from contents retrieved from Mobius and strategically distribute them to recipients.

Distribution Services enables the Mobius Administrator to schedule a recurring delivery or create a one-time action through supported output channels.

When scheduling a recurring delivery, the Administrator specifies a list of required reports then selects the output channel to be used, a list of recipients, and a schedule (with the repeat frequency). A delivery is initiated when a required report is archived in Mobius. It is completed when the required reports are gathered and the scheduled time is met.

When scheduling a one-time delivery, the Administrator specifies a list of required reports along with their report version(s) to be used for the delivery. It then selects the output channel to be used, a list of recipients, and a scheduled or immediate delivery type. A delivery is initiated immediately or when the scheduled time is met and sent to the specified recipients.

Key Features

01

Report management and distribution

Mobius Distribution Services facilitates efficient management and distribution of content stored within the powerful Mobius repository. This includes documents, reports and report sections, images, MS Office content, audio, video, and more. Mobius Distribution Services does this by using either Mobius Direct Connect links, an attachment, or both, which ensures that the right information promptly reaches all appropriate stakeholders.

02

Flexible Deployment Options

Deploy Mobius in the cloud, with hybrid cloud, or on-premises. Distribution Services still provides seamless corporate communications.

03

Content federation and integration

Mobius enables the federation of content and integration with various applications: including, but not limited to, SAP (ECC, HANA, S/4HANA), SharePoint, Microsoft Office, CMIS integrated repositories (OpenText, Documentum, IBM® FileNet), Mainframe (IBM z/OS®) and older non-CMIS legacy repositories. It streamlines business workflows, ensures content is accessible within the required business context, and enables secure information-sharing while fulfilling communication requirements.

Key Benefits

01

Enhanced productivity

By automating content distribution and integrating with existing systems, Mobius reduces manual processes to increase efficiency and productivity.

02

Improved compliance and governance

The platform provides robust policy management capabilities, helping organizations comply with industry regulations and internal policies.

03

Scalability and flexibility

With its support for various deployment models and open standards, Mobius can scale according to organizational needs and adapt to evolving technological landscapes.

Summary

Rocket Mobius Distribution Services offers a comprehensive solution for managing and distributing enterprise content, enhancing operational efficiency, ensuring compliance, and providing the flexibility needed to adapt to changing business environments.
