

Rocket® SystemBuilder Extensible Architecture (SB/XA)

Quickly and easily develop modern business applications with Rocket SB/XA.

Rocket SystemBuilder Extensible Architecture (SB/XA) lets you focus on modeling your business logic using high-level tools and process definitions. Once defined, you can reuse defaults, validations, business rules, and data management expressions to bring consistency across all your applications. SB/XA's rapid application development tools keep your business logic independent of your application's look and feel leading to lower cost of ownership, reusable code, and easier software enhancement.

Benefits/Features

Take existing SB application to the web or mobile

Using SB/XA Services with Rocket® MVIS, wrap SB processes in web services to expose them via REST.

Optimized performance

Form cache, grid paging, and XPS report loading settings allow you to customize SB/XA's performance and make several performance changes.

Auto-complete functionality

Built-in AutoComplete styles allow you to use auto-complete functionality when entering input fields, making data entry faster and easier.

Simplified security

Developers can decide to allow users to authenticate once for access to the client, middle tier, and application server.

Supports easier DevOps

With multiple Communications Servers on one system, it's easy to compare and test multiple versions of SB.

Customizable language support

Partners can customize all client error messages to reflect their culture/ language to their customers.

With Rocket SB/XA, you can:

Fast-track application development

SB/XA simplifies application development by offering a standard format for writing code and shortcuts that produce suggested code based on user-selected options.

Deploy applications with ease

Click-once deployment delivers upgrades and centralized configurations when users start the application without the need to touch each PC.

Secure applications

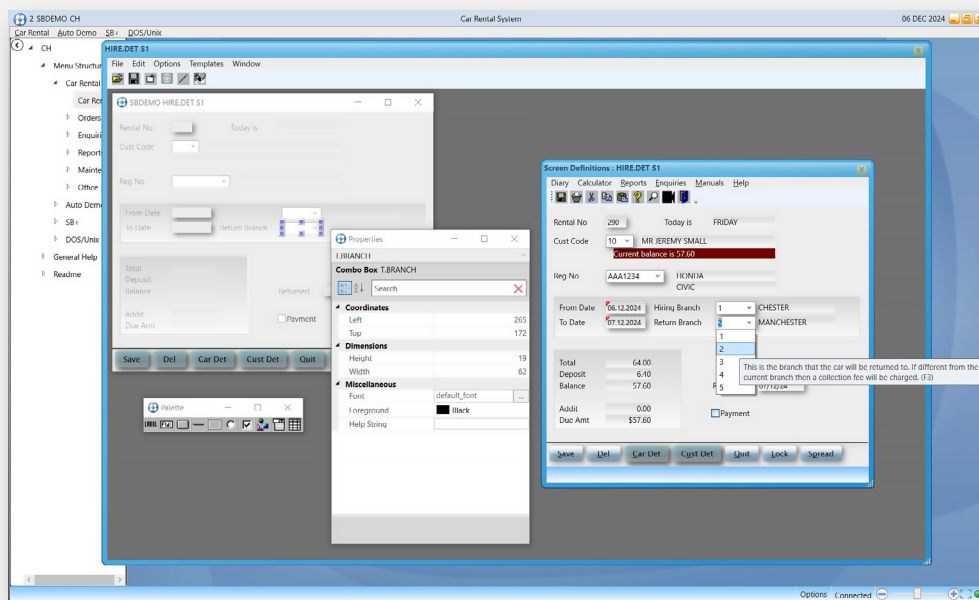

Developers can pick the authentication approach that best fits the environment, including Microsoft Windows, SB/XA, or Windows domain-level.

Do more, faster

Leverage commercial or custom .NET controls to quickly extend functionality.

Report data

Use Microsoft Excel, Word, or XML Paper Specification (XPS) formats and email Query Reports in Excel or XPS format directly from the XPS report viewer.

Exclusive features await. Upgrade to the latest release of Rocket SB/XA.
