

APPLICATION MODERNIZATION

Building the Right Interface is Like Choosing the Right Home Repair Project

1

STEP 1 - CREATE A PHASED APPROACH – MODERNIZE WHILE OPERATING AT FULL CAPACITY

1. GATHER REQUIREMENTS

Understand business initiatives driving modernization. Ensure your plans map to stakeholders requirements and strategy.

2. DETERMINE WHAT NEEDS TO BE UPDATED

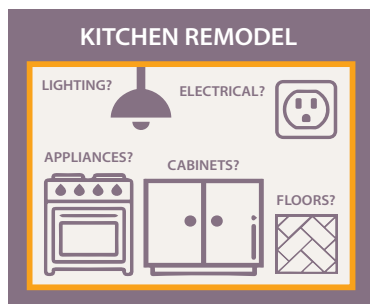

Identify what you need to change, including processes that need to be improved. Evaluate front-end functionality, such as customer-facing application screens for support, against back-office functions such as accounting. Front-end applications will typically be your highest priority.

ENTIRE HOUSE ?

3. QUANTIFY LEVEL OF EFFORT

Decide what type of transformation is needed for each application. This could mean standard HTML, custom HTML that includes advanced features, a custom UI, or web services. Factor in the number of screens and functionality you want to add.

4. PRIORITIZE THE MODERNIZATION EFFORT

Determine importance of each application based on how critical it is to your operations and revenue. Take a phased approach so you can modernize while operating the business at full capacity.

2

STEP 2 - CHOOSE THE MODERNIZATION OPTION THAT ADDRESSES YOUR BUSINESS NEEDS

LEGASUITE WEB	ROCKET API
<p>TERMINAL EMULATION</p> <p>Do Nothing</p>	<p>APPLICATION REWRITE/ RESTRUCTURING</p> <ul style="list-style-type: none"> Design your entire application from scratch Develop and test your entire application <p>Tear Down and Rebuild</p>
<p>HTML TRANSFORMATION</p> <ul style="list-style-type: none"> Transform 1:1 green screen to web UI Improve navigation look-and-feel <p>Paint Walls, New Flooring & Furniture</p>	<p>CUSTOM UI</p> <ul style="list-style-type: none"> Orchestrate functions from disparate applications to work together Integrate new components into existing applications <p>Complete Interior Redesign with Smart, Eco Friendly Features</p>
<p>HTML WITH CUSTOMIZATION</p> <ul style="list-style-type: none"> Improve process workflows Enhance user experience using JavaScript code <p>Update Several Rooms & Tear Down Interior Wall for Improved Traffic Flow</p>	<p>ROCKET API</p>
